

Samsung MagicInfo

Brought to you by AdB Audio Visual.

Flexible digital signage. Simple. In-screen remote controlled software that delivers flexible, high-quality digital signage.

What is Samsung MagicInfo?

Quite simply, one of the world's most flexible and reliable digital signage systems. There are two options for MagicInfo software:-

MagicInfo X

- LAN Control/Scheduling
- Full screen or up to 4 content windows simultaneously
- Very simple to operate
- Compatible with 400/460PXN Screens

MagicInfo Pro

- WAN Control/scheduling
- Full Screen or multiple windows simultaneously
- Fully flexible screen layout
- Compatible with 400/460/570/700DXN Screens

Who would use this system?

Because it's so flexible, anyone from a school to an airport will find MagicInfo perfect for their requirements. Shops, restaurants, hospitals, leisure centres, community halls, Universities, retail centres, company reception areas - the list is endless.

Is there a lot of kit?

No! All you need is a Samsung PXN or DXN screen with built in Windows XP software; and the MagicInfo software's included! That's it - no boxes, servers or additional software. The screens themselves are networkable, so you only require mains power and a network cable to connect them no VGA or other cabling that may suffer interference or be subject to distance limitations.

How big is the display area?

As big as you want it to be - from one screen to a bank of twenty, or more. It's genuinely flexible.

Features

Easy Content Scheduling: To schedule content is just a simple three step process.

- Select the files to be displayed
- Select the screen on which it should be displayed
- Select the times at which it should go live.

...and go live!

Remote Device Management

You can schedule content remotely using a central management device which shows you the status of each screen and allows you to manage the settings of each display.

User Friendly

The 'Graphical User Interface' (GUI) makes set up almost intuitive - certainly quick and simple. Day to day operating is simple with minimal training required to create eye catching screen content. Due to it's use of common file types much of the content will be available already from existing in-house content. There is no need for templates to be created by 3rd party companies - simply select the files you want and send directly to the selected screens.

Targeted Messaging

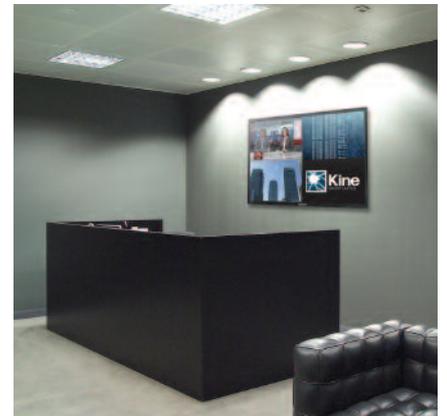

MagicInfo can deliver unique content to each screen allowing for highly targeted communications. In fact, you can even split screens. That's unusual - most digital signage systems send the same content to each display.

Multiple Content Types

The MagicInfo software is compatible with media files (photo, audio and video) and office files (PowerPoint, Excel, Word and PDF). MagicInfo Pro now offers support for Flash Animation files too! An external source (such as CCTV camera, Freeview/Sky box, DVD player) can also be added to the schedule as either a window or full screen, giving complete flexibility of your content.

Scalable

Each screen connects directly to the network without the need for a dedicated PC or complicated cabling, so the only additional cost, if you want to expand the system, is the screen itself.

More about...

Advanced Multi Display Control

The MagicInfo Pro interface is optimised for professional use and allows familiar windows type tree and list views. Totally flexible, it allows you to set up content and resolution freely, monitor and adjust display conditions remotely via the Local Area or Wide Area Networks.

Setting up and controlling multiple displays is simple with MagicInfo. The intuitive display screens are designed to offer easily expandable user Interfaces and full flexibility to customise content and preview images before broadcast.

Advanced MDC, multi content build capability and various effects offer endless eye-catching display possibilities. Remote multi display screen system checking allows temperature feedback and adjustment for total peace of mind and optimum system performance.

Stylish Thin Bezel Design

Ultra slim bezel width of 2cm on the DXN Range offers a more elegant appearance and enhanced multi display screen performance.

With inbuilt image enlarging processor and the capability to support video wall combinations from 1x1 up to 5x5, the DXN range of display solutions offers unparalleled video wall appearance and possibility.

Stylish and elegant, these displays are both functional and premium in both look and performance.

High Brightness

With an outstanding high bright performance gain of up to 30% compared to previous LCD models, the DXN range of display solutions offers high impact, high colour messaging.

Samsung is always striving to re-create natural images with vivid colour tone and outstanding image quality.

The 40 & 46 models offer market leading 700 cd/m brightness levels whilst the 57 model still offers an impressive 600 cd/m brightness capability.

Outstanding Reliability

Samsung DXN LCD series with DID panel technology, specifically developed for the commercial markets, offers unparalleled reliability and performance never before seen in conventional TFT LCD panels.

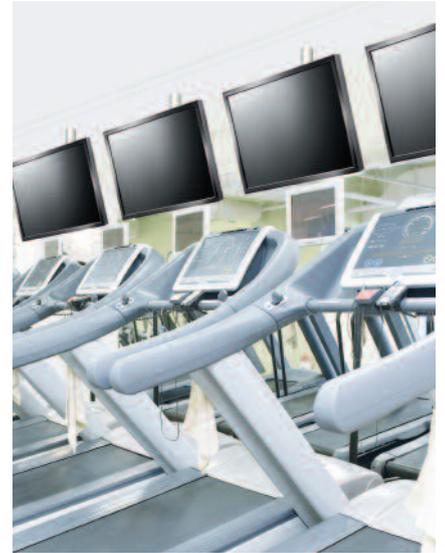

Operating at a dramatically lower panel temperature than traditional TV panel, the DXN series ensures enhanced panel lifetime. Coupled with superior fan circuit design you are guaranteed higher reliability. Furthermore both the Pxn and Dxn displays come with a three year commercial warranty.

HDMI Connectivity & HD Ready

HDMI capability enables simple and easy connection of digital devices with a single cable that transfers uncompressed visual contents without data loss. HDMI also provides an interface between any compatible digital audio / video source.

Together with support for D-Sub, DVI, CVBS, S-Video and component the MagicInfo displays are perfectly designed to deliver stunning high resolution 1366 x 768 HD ready output with the minimum of fuss.

Certain features only available on MagicInfo Pro/DXN range
